13th Annual Neonatal Advanced Practice Conference

Overview, Target Audience and Learner Outcome

This conference presents topics of interest to neonatal care providers, including NNPs, nurses, physicians, as well as other health care professionals working in the neonatal ICU. Speakers cover new and emerging neonatal topics, clinical presentations, as well as reviews of available evidence for current practice strategies related to the anticipation, recognition, assessment, stabilization, and acute and long-term care of the neonate. Discussion and question sessions will follow each presentation. At the conclusion of this event, the participant will report increased knowledge and intent to change practice related to current best-practice and innovative solutions for patient care in the NICU.

Learning Objectives

- Assess mental health and substance use among medical professionals.
- Examine bronchopulmonary dysplasia definitions over the decades, the incidence of BPD and screening for pulmonary hypertension in BPD.
- Discuss maternal/infant health and mortality implications of addressing postpartum care to 4th trimester care.
- Discuss two areas in practice that would benefit from integration of Point of Care Ultrasound (POCUS).
- Examine early detection & screening for cerebral palsy.
- Identifying fetal and neonatal pharmacology for the APRN.
- Explain rationale for use of NAVA strategy in the NICU.
- Describe care for infants born at 22-weeks gestation.
