March 30, 2023

Overview, Target Audience and Learner Outcome

Interdisciplinary healthcare team members will discuss respiratory assessment and vital sign trending in pediatric patients that would prompt early recognition of worsening clinical status and initiation of interventions. This session will use three separate respiratory case studies to discuss escalation of care and methods for initiating and engaging in multidisciplinary communication when a patient is showing clinical signs of worsening respiratory status. As a result of this activity, learners will be able to report increased knowledge and intent to change practice related to providing current, evidence-based care to pediatric patients.

Objectives

- Discuss the trend feature in Epic to identify early signs of clinical changes in patients with respiratory distress
- Describe clinical signs of respiratory distress
- Discuss methods for engaging in multidisciplinary communication when a patient is showing signs of respiratory distress

Faculty from Children's Hospital Colorado / University of Colorado

Joyce Baker, MBA, RRT-NPS, AE-C, FAARC

Asthma Clinical Specialties Coordinator

Children's Hospital Colorado

Elisabeth Connell, NP

Senior Instructor

Director of Inpatient Pulmonary Advance Practice Providers

Breathing Institute

Continuing Education Credit

Registration, attendance, sign-in and submission of the evaluation, including a written response to questions related to any change in practice that you may make as a result of learning that took place at this program, are required for successful completion and receipt of the certificate of attendance.
